### 1.1 Inleiding

SwifterwinT B.V. en Nuon Wind Development B.V. hebben een samenwerkingsovereenkomst gesloten ten behoeve van de realisatie van een nieuw windpark: Windplan Blauw. Deze zal in het gebied tussen Lelystad, Swifterbant en Dronten komen te liggen. Deze notitie bevat het slagschaduwonderzoek voor het Voorkeursalternatief (VKA).

Het doel van dit onderzoek is het bepalen van de slagschaduweffecten ter plaatse van de gevoelige objecten rondom het windpark.

### 1.2 Slagschaduw

Een draaiende windturbine zorgt voor slagschaduw. Op dagen met bepaalde omstandigheden (voldoende zonlicht, wind en positie ten opzichte van de zon) kan deze slagschaduw als hinderlijk ervaren worden door omwonenden.

In de Activiteitenregeling is vastgesteld dat, wanneer de afstand tussen gevoelige objecten (zoals woningen) en een windturbine minder dan twaalf maal de rotordiameter bedraagt en gemiddeld meer dan 17 dagen per jaar gedurende meer dan 20 minuten per slagschaduw optreedt een stilstandvoorziening is vereist.

---

## Wettelijke normen slagschaduw

Ten aanzien van slagschaduw wordt in artikel 3.14 onder 4. van het Activiteitenbesluit verwezen naar de bij de ministeriële regeling te stellen maatregelen (de Activiteitenregeling). In deze regeling is in artikel 3.12 voorgeschreven dat een windturbine is voorzien van een automatische stilstandvoorziening die de windturbine afschakelt indien slagschaduw optreedt ter plaatse van gevoelige objecten voor zover de afstand tussen de windturbine en de woning minder bedraagt dan twaalf maal de rotordiameter<sup>1</sup> en gemiddeld meer dan 17 dagen per jaar gedurende meer dan 20 minuten slagschaduw kan optreden. Ook voor slagschaduw kan het bevoegd gezag maatwerkvoorschriften vaststellen.

---

## Uitgangspunten

Rondom de turbines van Windplan Blauw liggen gevoelige bestemmingen binnen twaalf maal de rotordiameter. Het turbintype is nog onbekend, voor het onderzoek naar slagschaduw effecten is daarom een worst-case turbine gebruikt. Rotordiameter en ashoogte zijn bepalend voor slagschaduw, grotere rotordiameter en hogere ashoogte leidt altijd tot meer slagschaduw effecten. Bij het bepalen van een worst case turbine is in deelgebieden IJsselmeer en West een maximale tiphoogte aangehouden van 213 m. In deelgebied Oost is de maximale tiphoogte 248 m.

Binnen de Elandtocht en de Rendiertocht geldt de maximale hoogte van 248 m. De worst-case afmeting is dan 166 m ashoogte en 164 m rotordiameter (248 m in totaal). Voor turbines langs de Rivierduintocht, de Klokbeektocht en Buitendijks geldt een maximale tiphoogte van 213 m. De worst-case afmetingen voor deze gebieden zijn dan 131 m ashoogte en 164 m rotordiameter (213 m in totaal). De turbine-eigenschappen zijn weergegeven in de onderstaande tabel.

Tabel 1.1 Worst-case windturbines gebruikt voor slagschaduw analyse

Turbine	Vermogen (kW)	Ashoogte (m)	Rotordiameter (m)	Tiphoogte (m)
WPBlauw WT4	5.000	131	164	213
WPBlauw WT2	5.000	166	164	248

Om aan de norm te toetsen is slagschaduw vertaald in de verwachte hinderduur. Dit is het aantal uren in een jaar dat slagschaduw wordt veroorzaakt. De volgende data is gebruikt voor de analyse.

- aangezien het een gemiddelde betreft, wordt uitgegaan van het gemiddeld aantal zonuren als opgegeven door het KNMI voor locatie Lelystad tussen 2008 en 2017;
- tevens zijn de windrichting en de windsnelheid meegenomen in de analyse. De onderlinge beïnvloeding, oftewel windzog, is berekend middels N/O Jensen Wake Model. Voor de meteorologische gegevens is uitgegaan van een Mesoscale dataset van EMDConWx. De dataset beslaat gebieden met een resolutie van 3 x 3 kilometer en historische uurlijkse waarden (richting, snelheid, temperatuur, et cetera) voor heel Europa;
- in de omgeving zijn weinig objecten die het windprofiel beïnvloeden. Er is uitgegaan van de volgende terrein standaard binnen WindPro: open farmland;
- cumulatie van slagschaduw op gevoelige objecten door andere turbines in de omgeving is weergegeven in de resultaten. Het gaat in dit geval om cumulatie met de turbines voor de overige inrichtingen. In enkele gevallen komt het voor dat de hoeveelheid cumulatieve slagschaduw lager is dan voor de enkele inrichting. Dit heeft te maken met windafvang tussen turbines; die is hoger wanneer alle inrichtingen worden meegenomen. Windafvang resulteert in namelijk in minder draaiuren waardoor het slagschaduw effect ook minder wordt.

Omdat niet te bepalen is hoeveel minuten slagschaduw per keer plaatsvindt, wordt getoetst aan een verwachte slagschaduwduur van maximaal 17 (dagen) \* 20 (minuten) = 340 minuten, oftewel 5 uur en

---

<sup>1</sup> In alle gevallen ligt de berekende slagschaduwcontour lager dan twaalf maal de rotordiameter.

40 minuten. Deze toetsing is strenger dan de wettelijke eis, aangezien in deze berekening alle slagschaduwminuten zijn meegenomen, dus ook de dagen dat het minder dan 20 minuten optreedt.

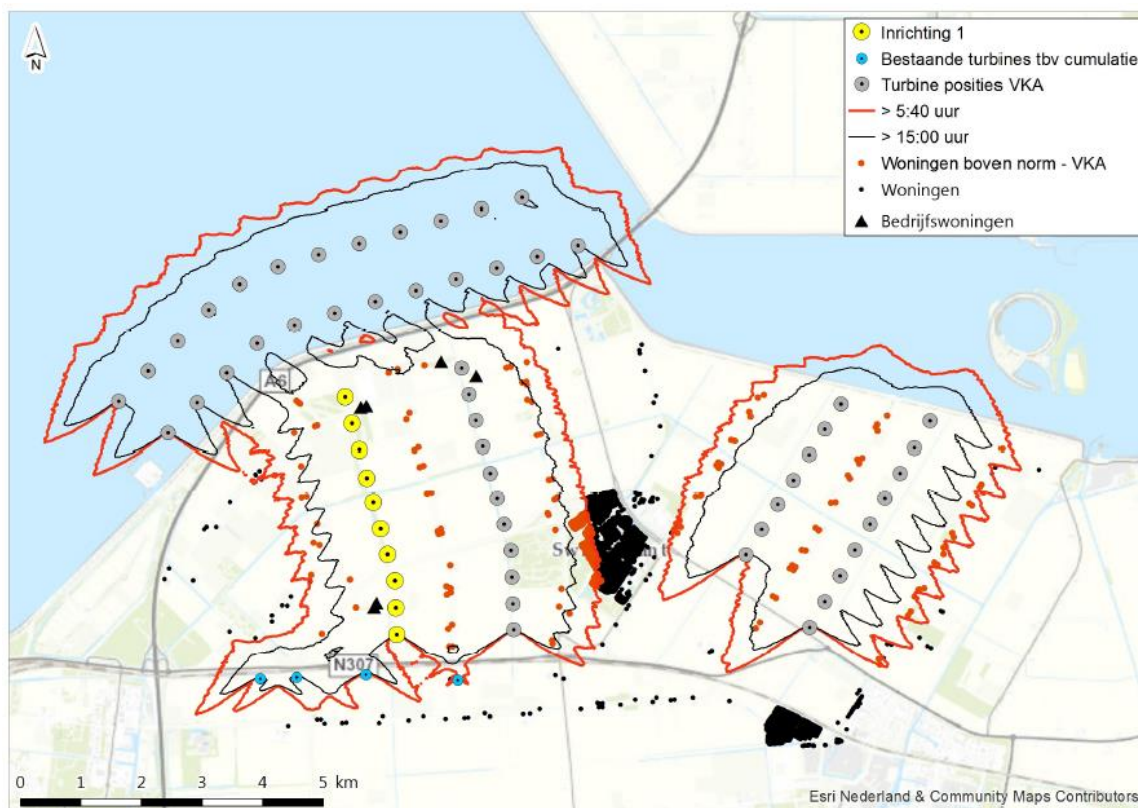

### Toetsing

In afbeelding 1.1 zijn twee hindercontouren weergegeven:

- het aantal gevoelige objecten dat zonder mitigatie meer dan 05.40 uur per jaar slagschaduw ondervindt (rode contour);
- het aantal gevoelige objecten dat zonder mitigatie meer dan 15 uur per jaar slagschaduw ondervindt (zwarte contour).

In totaal liggen 772 objecten binnen de getoetste contour van 05.40 uur wanneer cumulatie met de vier turbines ten zuiden van het projectgebied wordt meegenomen. Voor gevoelige objecten die buiten de rode contour liggen wordt zeker aan de norm voor de maximale hinderduur waarvan in de toetsing uitgegaan is voldaan. Voor de woningen die binnen de 5:40 uur contour liggen dienen mitigerende maatregelen genomen te worden wanneer deze niet aan de norm uit de Activiteitenregeling kan worden voldaan (zie kader voor uitleg).

Afbeelding 1.1 Resultaten slagschaduwanalyse met cumulatie (zonder mitigatie)

De windturbines van Windplan Blauw moeten worden voorzien van een automatische stilstandsregeling. De windturbines worden automatisch afgeschakeld zodra er slagschaduw optreedt bij gevoelige objecten. Aldus is verzekerd dat de maximale slagschaduw is beperkt tot de maximale slagschaduw zoals toegestaan op grond van de Activiteitenregeling.

### Bedrijfswoningen

Voor zes woningen in het projectgebied geldt dat dit bedrijfswoningen zijn die bij het windpark horen. Dit betekent dat de woningen vanwege de functionele en organisatorische bindingen tussen de eigenaren/gebruikers en het windpark niet zijn aan te merken als gevoelige objecten. Ondanks dat deze

woningen hiermee niet langer als gevoelig object worden getoetst aan de normering uit het Activiteitenbesluit en de -regeling, is ook voor deze woningen de huidige en toekomstige slagschaduwduur inzichtelijk gemaakt.<sup>1</sup>

### Conclusie

Het VKA veroorzaakt slagschaduw hinder. Binnen de 05.40 uur-contour vallen 772 gevoelige objecten. Door het treffen van een stilstandsvoorziening is deze overschrijding te mitigeren en wordt voldaan aan de wettelijke norm ten aanzien van slagschaduw hinder door windturbines. Het plan voldoet daarmee aan geldende wet- en regelgeving. Dit geldt zowel voor de dubbeldraaiperiode en voor de eindfase. Het instellen van deze voorziening zorgt wel voor een reductie in de energieproductie. Op basis van de verwachte slagschaduw, die veroorzaakt wordt per windturbine, is bepaald hoe lang elke windturbine jaarlijks uitgeschakeld moet worden om deze slagschaduw te voorkomen. Voor het voorkeursalternatief betekent dit een energieopbrengstverlies van 0,3 tot 0,5 % per jaar.

---

<sup>1</sup> De mitigerende maatregelen die genomen worden voor woningen van derden leiden vanzelfsprekend ook tot vermindering van slagschaduwbelasting op de bedrijfswoningen. Voor bedrijfswoningen wordt een normoverschrijding acceptabel geacht. De bewoners ondervinden naar verwachting minder hinder van de windturbines vanwege de bijzondere functie en taken die zij hebben als toezichthouder. Er is daardoor sprake van een aanvaardbaar woon- en leefklimaat. Daar komt bij dat ook het (economisch) profijt bijdraagt aan het ondervinden van minder hinder.

## BIJLAGE: WINDPRO OUTPUT VKA CUMULATIE

## SHADOW - Main Result

**Calculation:** Slagschaduw WPBlauw - Vergunningen - Cumulatie alle inrichtingen

### Assumptions for shadow calculations

Maximum distance for influence  
Calculate only when more than 20 % of sun is covered by the blade  
Please look in WTG table

Minimum sun height over horizon for influence 5 °  
Day step for calculation 1 days  
Time step for calculation 1 minutes

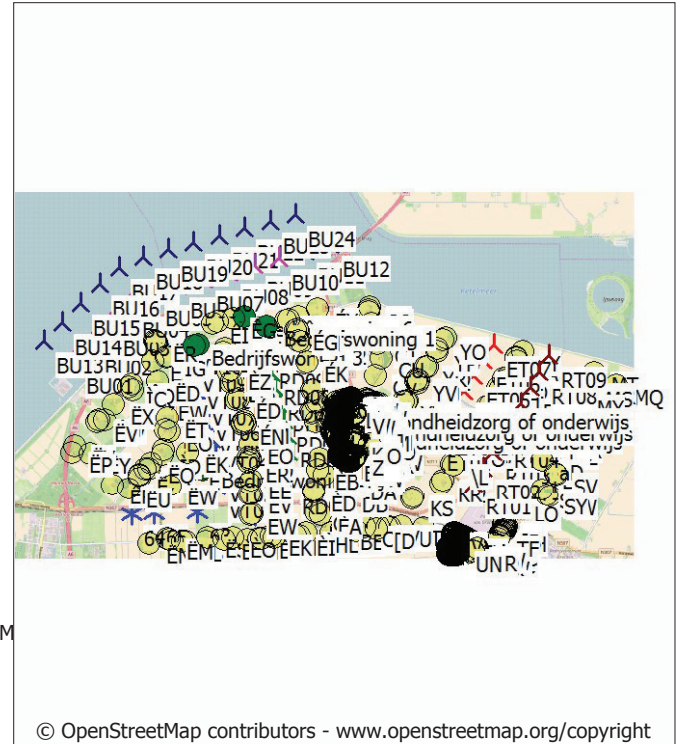

Sunshine probability S (Average daily sunshine hours) []  
Jan Feb Mar Apr May Jun Jul Aug Sep Oct Nov Dec  
2.11 3.10 5.00 6.82 7.26 7.17 7.02 6.80 5.35 3.93 2.03 1.78

Operational hours are calculated from WTGs in calculation and wind distribution:  
EmdConwx\_N52.580\_E005.600 (1)

Operational time  
N NNE ENE E ESE SSE S SSW WSW W WNW NNW Sum  
473 403 513 624 478 415 611 1,062 1,312 960 671 719 8,240  
Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:  
Height contours used: Project Wizard Elevation Data Grid (SRTM: Shuttle DTM)  
Obstacles used in calculation  
Eye height: 1.5 m  
Grid resolution: 10.0 m

All coordinates are in  
Dutch Stereo-RD/NAP 2008

## SHADOW - Main Result

### Calculation: Slagschaduw WPBlauw - Vergunningen - Cumulatie alle inrichtingen

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.
